Differences Between Introduction and Discussion Literature Reveiw

How to Improve your Literature Reveiw of your research paper

Creating Scientific Stories...

Literature Review helps you in the following:

- Evaluate Past Research
- Identify Experts
- Identify Key Questions
- Determine Methodologies used in Past Studies.

What are the main difference between introduction and discussion introduction?

Literature Review for Introduction Vs Disscussion

Introduction

Use previous literature to introduce your research.

Discuss the subjectspecific literature after general introduction.

Identify Knowledge gaps based on previous literature.

Discussion

Use previous studies to explain or reinforce your findings.

Only include references that are directly relevant to the topic.

Do not cite review articles unless essential.

Comparision of Literature Review

	Introduction	Discussion
Purpose	To help readers understand the need to conduct the research study.	To help the reader interpret the result and understand the implication of the study finding.
Research Question	Narrates the hypothesis or research question.	Provide the answer of research question and states if the study finding support the hypothesis.
Follow and Organization	From general information to specific study objective	From specific study findings to implication for the relevant general population.

What Should be Included in the Literature Review

Introduction

- Introduce the topic
- Establish the significance of the study
- Provide an overview of the relevant literature
- Establish a context for the study using the literature
- Identify knowledge gaps
- Illustrate how the study will advance knowledge on the topic.

Discussion

- To Provide Context for Your Study.
- Compare your Findings to Other Studies.
- State the Contribution of Your Study

Common Mistake Should be Avoided

Introduction

- Elaborating on the studies mentioned in the literature review.
- Use studies from the literature review to support your research aggressively.
- Directly quoting studies from the literature review.

Discussion

- Mention all sorts of studies, some of which are not even relevant to the topic under investigation.
- Some authors cite
 previous work solely
 based on the abstract,
 without even going
 through the entire
 paper.
